RAILROAD COMMISSION OF TEXAS
OFFICE OF GENERAL COUNSEL

OIL AND GAS DOCKET IN THE SUSIE Q (LEONARD) FIELD,
NO. 8A-0262738 YOAKUM COUNTY, TEXAS

FINAL ORDER
APPROVING THE APPLICATION OF ROCA OPERATING, INC.
FOR NEW FIELD DESIGNATION AND FIELD RULES
FOR THE SUSIE Q (LEONARD) FIELD
YOAKUM COUNTY, TEXAS

The Commission finds that after statutory notice in the above-numbered docket heard on September 10, 2009, the presiding examiner has made and filed a report and recommendation containing findings of fact and conclusions of law, for which service was not required; that the proposed application is in compliance with all statutory requirements; and that this proceeding was duly submitted to the Railroad Commission of Texas at conference held in its offices in Austin, Texas.

The Commission, after review and due consideration of the examiner's report and recommendation, the findings of fact and conclusions of law contained therein, hereby adopts as its own the findings of fact and conclusions of law contained therein, and incorporates said findings of fact and conclusions of law as if fully set out and separately stated herein.

Therefore, it is ordered by the Railroad Commission of Texas that the application of ROCA Operating, Inc. for new field designation for its Susie Q 751 No. 1 is hereby approved. The new field shall be known as the Susie Q (Leonard) Field, ID No. 87378 500, Yoakum County, Texas. It is further ordered by the Railroad Commission of Texas that the following rules shall be adopted for the Susie Q (Leonard) Field, Yoakum County, Texas.

RULE 1: The entire correlative interval from 9,252 feet to 9,720 feet as shown on the Schlumberger Three Detector Litho Density Compensated Neutron/Spectral Gamma Ray log of the Susie Q 751 No. 1 (API 42-501-35600), Section 751, Block D, Gibson, J H/Kendrick, WA Survey, A-433, Yoakum County, Texas, shall be designated as a single reservoir for proration purposes and be designated as the Susie Q (Leonard) Field.

RULE 2: No well for oil or gas shall hereafter be drilled nearer than SIX HUNDRED SIXTY (660) feet to any property line, lease line, or subdivision line and no well shall be drilled nearer than ONE THOUSAND TWO HUNDRED (1,200) feet to any applied for, permitted or completed well in the same reservoir on the same lease, pooled unit or unitized tract. The aforementioned distances in the above rule are minimum distances to allow an operator flexibility in locating a well, and the above spacing rule and the other rules to follow are for the purpose of permitting only one well to each drilling and proration unit. Provided however, that the Commission will grant exceptions to permit drilling within shorter distances and drilling more wells than herein prescribed whenever the Commission shall
have determined that such exceptions are necessary either to prevent waste or to prevent
the confiscation of property. When exception to these rules is desired, application therefor
shall be filed and will be acted upon in accordance with the provisions of Commission
Statewide Rules 37 and 38, which applicable provisions of said rules are incorporated
herein by reference.

In applying this rule, the general order of the Commission with relation to the
subdivision of property shall be observed.

RULE 3: The acreage assigned to the individual oil well for the purpose of allocating
allowable oil production thereto shall be known as a proration unit. The standard drilling
and proration units are established hereby to be ONE HUNDRED SIXTY (160) acres. No
proration unit shall consist of more than ONE HUNDRED SIXTY (160) acres except as
hereinafter provided. The two farthermost points in any proration unit shall not be in excess
of FOUR THOUSAND FIVE HUNDRED (4,500) feet removed from each other; provided
however, that in the case of long and narrow leases or in cases where because of the
shape of the lease such is necessary to permit the utilization of tolerance acreage, the
Commission may after proper showing grant exceptions to the limitations as to the shape
of proration units as herein contained. All proration units shall consist of continuous and
contiguous acreage which can reasonably be considered to be productive of oil. No double
assignment of acreage will be accepted.

If after the drilling of the last well on any lease and the assignment of acreage to
each well thereon in accordance with the regulations of the Commission there remains an
additional unassigned acreage of less than ONE HUNDRED SIXTY (160) acres, then and
in such event the remaining unassigned acreage up to and including a total of FORTY (40)
acres may be assigned as tolerance acreage to the last well drilled on such lease or may
be distributed among any group of wells located thereon, so long as the proration units
resulting from the inclusion of such additional acreage meet the limitations prescribed by
the Commission.

An operator, at his option, shall be permitted to form optional drilling units of EIGHTY
(80) acres. A proportional acreage allowable credit will be given for a well on a fractional
proration unit. The two farthermost points of a EIGHTY (80) acre fractional proration unit
shall not be greater than THREE THOUSAND TWO HUNDRED FIFTY (3,250) feet
removed from each other.

Operators shall file with the Commission certified plats of their properties in said field,
which plats shall set out distinctly all of those things pertinent to the determination of the
acreage credit claimed for each well; provided that if the acreage assigned to any proration
unit has been pooled, the operator shall furnish the Commission which such proof as it may
require as evidence that interests in and under such proration unit have been so pooled.

RULE 4: The maximum daily oil allowable for each well in the subject field shall be
the discovery allowable of 440 barrels of oil per day until expiration of this discovery
allowable. At that time, the 1965 yardstick allowable shall be effective. The actual allowable for an individual well shall be determined by the sum total of the two following values:

a. Each well shall be assigned an allowable equal to the top allowable established for a well having a proration unit containing the maximum acreage authorized exclusive of tolerance acreage multiplied by 50% and by then multiplying this value by a fraction, the numerator of which is the acreage assigned to the well and the denominator of which is the maximum acreage authorized for a proration unit exclusive of tolerance acreage.

b. Each well shall be assigned an allowable equal to its potential based on the most recent well test filed with the Commission multiplied by 50%, provided that this value shall not exceed 435 barrels of oil per day multiplied by 50%.

Done this 29th day of September, 2009.

RAILROAD COMMISSION OF TEXAS

(Order approved and signatures affixed by OGC Unprotested Master Order dated September 29, 2009)
