Dear PRC, with reference to allowing Professional Engineers the ability to sign Survey maps: this practice was halted about 1980 due to the fact that PE's do not have the understanding of legal elements of land title survey law. They do not adhere to principles of proper boundary construction/reconstruction nor are they interested in putting the time into researching land title and the ramifications recorded instruments have on land boundaries. I have followed behind many engineers over my 38 years of practice and my opinions have been established from my experience. The "sunset" on letting engineers mess with land surveying for very valid reasons. LET THAT DECISION STAND! Best Regards. Dan
